

# EduGenie Performance Test Report

## Purpose

The purpose of performance testing is to measure the responsiveness and stability of the EduGenie application.

## Test Environment

| Item             | Details                            |
|------------------|------------------------------------|
| Operating system | Windows                            |
| Python version   | Python 3.11                        |
| Backend          | FastAPI                            |
| AI provider      | Google Gemini                      |
| Browser          | Microsoft Edge or Google Chrome    |
| Network          | Record network used during testing |
| Test date        | Add date                           |

## Test Cases

| Test ID | Test                 | Expected Result              | Actual Result | Status  |
|---------|----------------------|------------------------------|---------------|---------|
| PT-01   | Open homepage        | Homepage loads successfully  | Add result    | Pending |
| PT-02   | Open health endpoint | Response is returned quickly | Add result    | Pending |
| PT-03   | Ask a question       | AI answer is returned        | Add result    | Pending |
| PT-04   | Explain a concept    | Explanation is returned      | Add result    | Pending |
| PT-05   | Generate a quiz      | Quiz is returned             | Add result    | Pending |
| PT-06   | Summarize text       | Summary is returned          | Add result    | Pending |
| PT-07   | Generate roadmap     | Roadmap is returned          | Add result    | Pending |

## Measurements

Record the actual results after testing.

| Endpoint     | First Request | Second Request | Third Request | Average |
|--------------|---------------|----------------|---------------|---------|
| /api/health  |               |                |               |         |
| /api/ask     |               |                |               |         |
| /api/explain |               |                |               |         |

| Endpoint       | First Request | Second Request | Third Request | Average |
|----------------|---------------|----------------|---------------|---------|
| /api/quiz      |               |                |               |         |
| /api/summarize |               |                |               |         |
| /api/roadmap   |               |                |               |         |

## Performance Observations

Record:

- Whether the homepage loads correctly.
- Whether API responses are delayed.
- Whether Gemini quota errors occur.
- Whether the application remains usable during testing.
- Whether the interface works on a smaller screen.

## Conclusion

The performance results should be completed only after the actual tests are run. Do not mark a test as passed without recording the result.
